SUMMARY

Java backend engineer with ~1.5 years in regulated NBFC lending, owning shared platform services—Drools/Spring Boot credit decisioning, Kafka-backed microservices observability, multi-product compliance pipelines (Grafana, Loki, OpenSearch, S3, Jenkins), and a production LangChain RCA stack (RAG, on-prem LLM, MCP/Jira) for log and event correlation. Delivers Selenium/Playwright automation and reconciliation tooling used by lending, home-loan, and WhatsApp product lines.

EXPERIENCE

Software Engineer

Capri Global Capital Ltd. | Gurugram, Haryana, India February 2025 – Present

- Owned multi-product compliance reporting pipeline (Python, Grafana/Loki, AWS S3, openpyxl, Jenkins) for CapriLoans, Capri Home Loans, and WhatsApp—daily/monthly Excel reports, S3 layout, and email routing to 5+ stakeholder groups; ~8 hours saved per reporting cycle.
- Shipped production incident RCA agent (LangChain, RAG, on-prem LLM, MongoDB, Redis, DynamoDB, OpenSearch, MCP/Jira) correlating Loki logs and Apache Kafka error streams across Spring Boot microservices; automated triage from Jira/email triggers; ~40% lower mean-time-to-diagnosis for P1/P2 incidents.
- Own Drools business rules and Spring Boot REST APIs for loan credit decisioning; JUnit-backed BRE health checks and API regression for 500+ applications/month; debug cross-service failures involving Kafka consumers and downstream rule evaluation.
- Built daily calling-data reconciliation (Selenium, Redash API, MongoDB, AWS S3, Jenkins) matching Elision and Slash RTC exports to callback records; HTML/CSV discrepancy reports to S3 and email for ops and engineering.
- Built Playwright regression and smoke suites for CapriLoans and Capri Home Loans (Strapi CMS auction/import and critical user journeys) across UAT and production; Jenkins-scheduled runs before major releases.
- Extended compliance and RCA workflows with OpenSearch-backed rejection search and DynamoDB-stored run metadata for faster forensics, idempotent replays, and audit traceability across lending products.

PROJECTS

AgentLoop

- Autonomous coding assistant with multi-step planning, file I/O, and shell execution; modular Spring tool-invocation framework (5+ tools; under 10 lines of config to add a new capability).

EDUCATION

Chandigarh University, Mohali

B.Tech, Computer Science & Engineering | Aug 2020 – May 2024 | CGPA: 7.8

SKILLS

- **Programming Languages**: Java, Python
- **Backend & Messaging**: Spring Boot, REST APIs, Drools, Apache Kafka, JUnit, Microservices, openpyxl
- **Data & Cloud**: MongoDB, MySQL, Redis, DynamoDB, OpenSearch/Elasticsearch, AWS (S3, Lambda)
- **Platform & Ops**: Grafana, Loki, Jenkins, Git, Linux, Selenium, Playwright, Redash, Apache POI
- **AI & Dev Tools**: On-prem LLM (production RCA), RAG, LangChain, MCP (Jira), OpenAI API, Tool-Calling Agents, Cursor

AWARDS & CERTIFICATIONS

- Spot Award, Capri Global Capital Ltd. (2025)
- Java Full Stack Development, Wipro (2022)
